# EXAMPLE SYSTEM DESIGN DOCUMENT

System Design Document (SDD) ↗

Project Title: Autonomous Mobile Robot (AMR) Security System ↓  
Version: 1.1↓  
Date: [Insert Date] ↘

---

◀ 1. Overview ↗

The Autonomous Mobile Robot (AMR) Security System is designed to provide autonomous patrolling, threat detection, and alerting within a secure area using a single AI-enabled robot. The system consists of one AMR equipped with necessary hardware and software components to operate independently, processing data on-board without the need for a central server. ↘

---

◀ 2. System Architecture ↗

Since the system consists of a single AMR, data processing, navigation, threat detection, and alerting are all performed locally on the AMR itself. The AMR communicates directly with a user interface on a PC via a local network (Wi-Fi) for monitoring, alerts, and manual override if required. ↘

프로젝트 제목: 자율 이동 로봇(AMR) 보안 시스템 ↓  
버전: 1.1↓  
날짜: [날짜 삽입] ↘

---

1. 개요 ↗

자율 이동 로봇(AMR) 보안 시스템은 단일 AI 기반 로봇을 사용하여 보안 구역 내에서 자율 순찰, 위협 탐지 및 경고를 제공하도록 설계되었습니다. 시스템은 단일 AMR이 독립적으로 작동할 수 있도록 필요한 하드웨어 및 소프트웨어 구성 요소로 구성되며, 중앙 서버 없이 데이터를 현장에서 처리합니다. ↘

---

2. 시스템 아키텍처 ↗

이 시스템은 단일 AMR으로 구성되므로 데이터 처리, 네비게이션, 위협 탐지 및 경고가 모두 AMR에서 로컬로 수행됩니다. AMR은 모니터링, 알림 및 수동 제어를 위해 PC의 사용자 인터페이스와 로컬 네트워크(Wi-Fi)를 통해 직접 통신합니다. ↘

# 5 Stages of Scrum Sprint

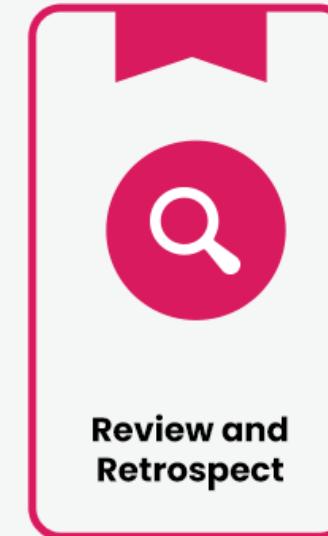

**Initiate**

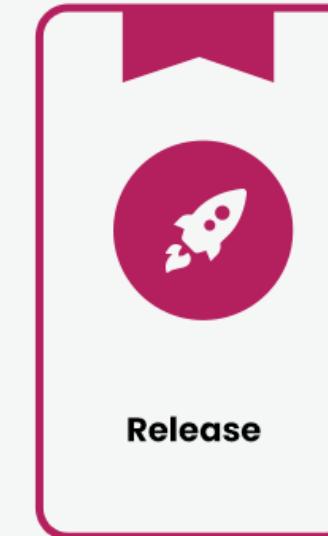

**Plan and Estimate**

**Implement**

**Review and Retrospect**

**Release**

This phase includes the processes related to the commencement of a project, such as a scope and objectives, creating and distributing its charter, and taking other steps to guarantee success.

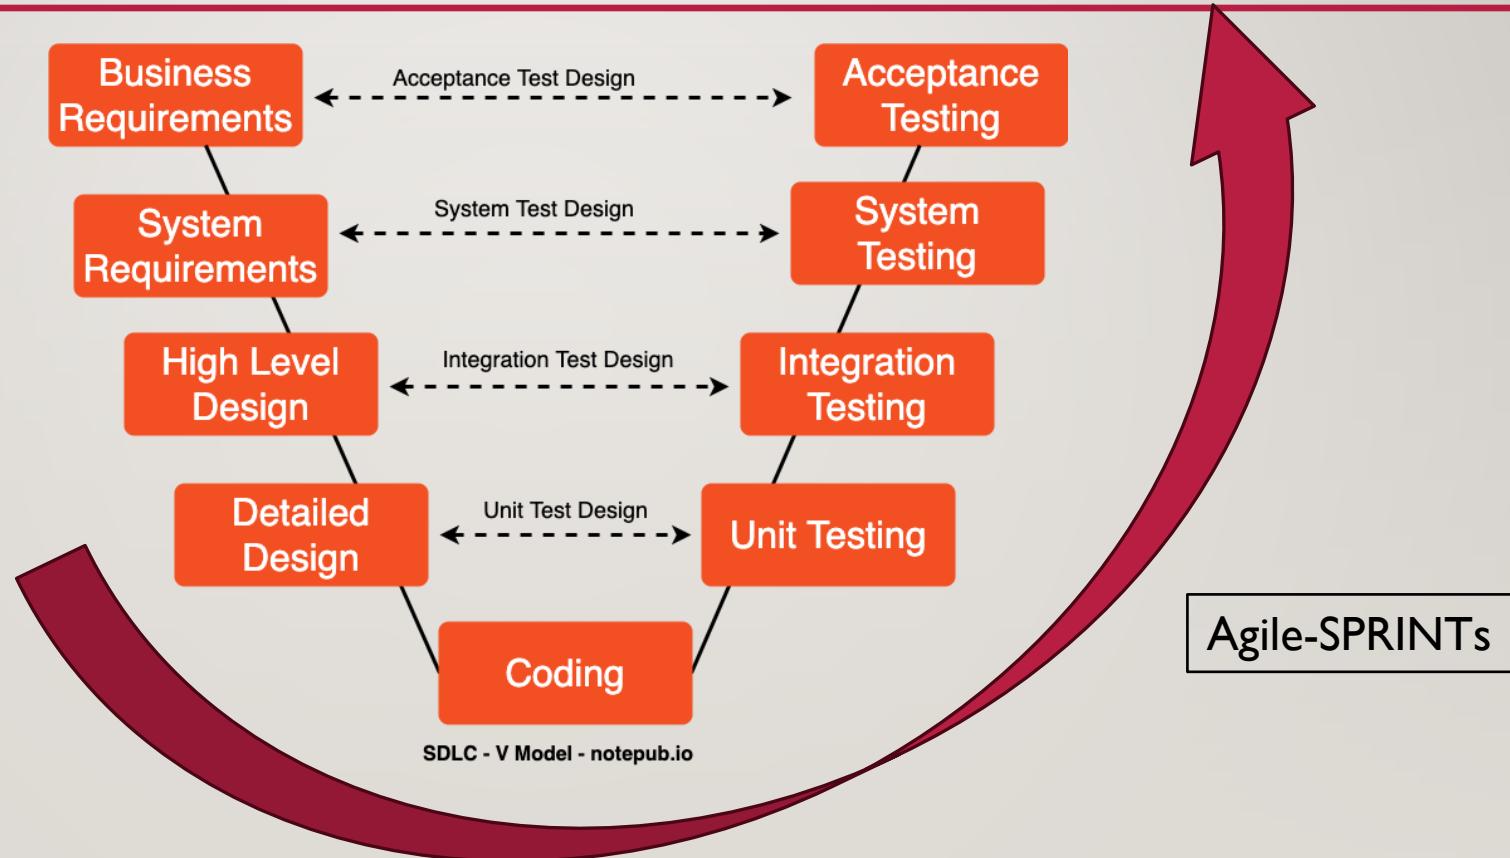

This phase involves planning and estimating processes, including creating user stories, approving, assessing, committing user stories, creating tasks, evaluating tasks, and creating a Sprint backlog.

This phase is about executing the tasks and activities to create a product. These activities include building the various outputs, conducting daily standup meetings, and grooming the product backlog.

This stage of the project lifecycle is concerned with evaluating what has been accomplished so far, whether the team has worked to plan, and how it can do things better in the future.

This stage highlights delivering the accepted deliverables to the customer and determining, documenting, and absorbing the lessons learned during the project.

# DETAIL DESIGN EXAMPLE

## START ROBOT NODE

- Load camera calibration when received.
- Store depth images as they come in.

WHEN object detection sends center point:

IF transform tree ready:

- Get pixel (x,y).
- Look up depth value at (x,y).
- If depth valid:
  - Compute real-world X,Y,Z in camera frame.
  - Transform point to map frame.
  - Create navigation goal with X,Y,Z.
  - Send goal to navigator.
  - Publish marker at goal position.

## NAVIGATION SETUP:

Detailed Design Document: AMR Navigation and Threat Detection

Project Title: Autonomous Mobile Robot (AMR) Security System  
Version: 1.0  
Date: [Insert Date]

## 1. Overview

This document outlines the detailed design for the Autonomous Mobile Robot (AMR) navigation and threat detection components. It covers the architecture, algorithms, data processing, and system interactions necessary to enable autonomous navigation within a secure area and real-time threat detection using onboard sensors.

## 2. System Architecture

The AMR system relies on onboard hardware (e.g., sensors, cameras, Jetson-Orin processor) and software (ROS2, OpenCV, YOLO) for autonomous navigation and real-time threat detection. All processing occurs locally on the AMR, with the capability to transmit alerts to a monitoring PC via Wi-Fi.

상세 설계 문서: AMR 네비게이션 및 위험 탐지

프로젝트 제목: 자율 이동 로봇(AMR) 보안 시스템  
버전: 1.0  
날짜: [날짜 삽입]

## 1. 개요

이 문서는 자율 이동 로봇(AMR)의 네비게이션 및 위험 탐지 구성 요소에 대한 상세 설계를 다룹니다. 자율 네비게이션과 실시간 위험 탐지를 위해 온보드 센서를 사용하는 데 필요한 아키텍처, 알고리즘, 데이터 처리 및 시스템 상호작용이 포함되어 있습니다.

## 2. 시스템 아키텍처

AMR 시스템은 자율 네비게이션 및 실시간 위험 탐지를 위해 온보드 하드웨어(예: 센서, 카메라, Jetson-Orin 프로세서)와 소프트웨어(ROS2, OpenCV, YOLO)를 활용합니다. 모든 처리는 AMR 내에서 로컬로 수행되며, 잠재적인 위험이 감지되면 Wi-Fi를 통해 모니터링 PC로 알림을 전송할 수 있습니다.
